

Any FLI score >40 identifies a good candidate for steatosis and for a positive response to Hepaxa®.

NAFLD Risk Level

Low Moderate High

FLI calculation performed (July 2018) and taken from online source at: [www.thecalculator.co/health/Fatty-Liver-Index-\(FLI\)-For-Hepatic-Steatosis-Calculator-1109.html](http://www.thecalculator.co/health/Fatty-Liver-Index-(FLI)-For-Hepatic-Steatosis-Calculator-1109.html) Fatty Liver Index (FLI) was validated based upon work by Bedogni G, Bellentani S, et al. (2006) The Fatty Liver Index. FLI is a simple and accurate predictor of hepatic steatosis in the general population.
